Hello Brian:

I am periodically in touch with Adrian.

We are moving forward on removing of waste and getting it disposed. See attached information on activities completed.

There have been no soil samples taken. This is planned for after this action is complete. It will likely be done by the PRP Group that is forming through the TCEQ Enforcement process.

Air monitoring continues around the site and near our operations. We do have odors from our operations as we open up tanks and remove materials from them. We are doing the best we can to minimize the odors.

The only water sampling was the initial sampling of the pools of water. These pools of water were discharged to the City of Houston sanitary sewer. All sediment that appeared to be contaminated was removed and oily contaminated areas cleaned up. The storm water is currently allowed to drain through a sediment filter and absorbent boom and release to the storm sewer. As mentioned previously, the site gets about 180,000 gallons of water per inch of rain.

See attached.

Good morning Gary,

Its been a while since we've spoke but I wanted to check in with you and see how the CES (Griggs Rd.) clean up is going? Also, I wanted to know what sort of air, water, and/or soil monitoring you've been doing during your clean up. Please let me know. Thank you.

Best,
Brian
